

## Who are we?

The team at T+ is made up of individuals aiming to revolutionize the way tenancy management is done in the real estate industry. We have developed a piece of technology that was never seen before; an end-to-end tenancy management and white-label system which is making lives easier for tenant management companies and sublet operators.

## Automated Rental Collection

Cut administrative hours in half with an integrated Direct Debit/FPX system to automate reminders and recurring rental collections. Less time checking and verifying payments; more time to generate sales.

## Dashboard Analytic

Track your most important numbers and statistics with a simple, consolidated dashboard on your home screen. Help your team analyse your users, properties, and recurring rentals; prepare effective reports, and watch your business grow.

## Access for All

A multi-user login means every party involved – the tenant, landlord, as well as the management company – is updated on the latest details of the property. Never miscommunicate again with an efficient and consistent flow of information for all.

## Maximum Data Security

With Amazon Web Services – which meets more than 90 security standards and requirements of military bases, government organisations, and international banking corporations around the world – rest assured your data is safely stored in one of the world's most secure clouds for data encryption.

## *We build the technology; you grow the business.*

T+ makes it easy for you to manage properties currently under your wing, and makes it possible to add more without doubling your costs and expenses.
